ACOUSTIC AND ELASTIC WAVE FIELDS
IN GEOPHYSICS, III
Methods in Geochemistry and Geophysics
(Volumes 1-2 are out of print)

1. A.S. Ritchie — Chromatography in Geochemistry
2. R. Bowen — Paleotemperature Analysis
3. D.S. Parasnis — Mining Geophysics
4. I. Adler — X-Ray Emission Spectrography in Geochemistry
5. The Lord Energlyn and L. Breadly — Analytical Geochemistry
7. E.E. Angino and G.K. Billings — Atomic Absorption Spectrometry in Geochemistry
8. A. Volborth — Elemental Analysis in Geochemistry, A: Major Elements
11. W. Ernst — Geochemical Facies Analysis
12. P.V. Sharma — Geophysical Methods in Geochemistry
13. C.H. Chen (Editor) — Computer-Aided Seismic Analysis and Discrimination
14A. O. Koefoed — Geosounding Principles, 1. Resistivity Sounding Measurements
15. A.A. Kaufman and G.V. Keller — The Magnetotelluric Sounding Method
16. A.A. Kaufman and G.V. Keller — Frequency and Transient Soundings
17. C.H. Chen (Editor) — Seismic Signal Analysis and Discrimination
18. J.E. White — Underground Sound Application of Seismic Waves
20A. A.A. Kaufman and G.V. Keller — Inductive Mining Prospecting, Part I: Theory
21. A.W. Wylie — Nuclear Assaying of Mining Boreholes - An Introduction
22. C.H. Chen (Editor) — Seismic Signal Analysis and Discrimination III
23. R.P. Philip — Fossil Fuel Biomarkers
24. R.B. Johns (Editor) — Biological Markers in the Sedimentary Record
25. J.C. D’Arnaud Gerkens — Foundation of Exploration Geophysics
26. P. Tygel and P. Hubral — Transient Waves in Layered Media
27. A.A. Kaufman and G.V. Keller — Induction Logging
28. J.G. Negi and P.D. Saraf — Anisotropy in Geoelectromagnetism
29. V.P. Dimri — Deconvolution and Inverse Theory - Application to Geophysical Problems
30. K.-M Strack — Exploration with Deep Transient Electromagnetics
31. M.S. Zhdanov and G.V. Keller — The Geoelectrical Methods in Geophysical Exploration
32. A.A. Kaufman and A.L. Levshin — Acoustic and Elastic Wave Fields in Geophysics, I
34. A.A. Kaufman and P. Hoekstra — Electromagnetic Soundings
35. M.S. Zhdanov and P.E. Wannamaker — Three-Dimensional Electromagnetics
36. M.S. Zhdanov — Geophysical Inverse Theory and Regularization Problems
ACOUSTIC AND ELASTIC WAVE FIELDS IN GEOPHYSICS, III

A.A. KAUFMAN
Colorado School of Mines
Golden, CO, U.S.A.

# Contents

Introduction

List of Symbols

Chapter 1: Hooke’s law, Poisson’s relation, and waves along thin bars
1. Hooke’s law and Poisson’s relation
2. Longitudinal waves in a thin bar
3. Longitudinal sinusoidal waves in a bar
4. Hooke’s law for shear stresses and torsional waves along a bar
5. Torsional waves
6. Bending of a bar at equilibrium and bending waves

Chapter 2. Basic equations of elastic waves
1. Equations of a motion of an elementary volume
2. Kinetic and potential energy and its flux
3. Strain, stress and Hooke’s law in the curvilinear orthogonal system of coordinates

Chapter 3. Elastic waves in a homogeneous medium
1. Longitudinal spherical waves
2. Spherical shear wave in a homogeneous medium
3. The displacement field caused by the point force
4. Propagation of waves caused by the point force
5. Longitudinal and shear plane waves
Chapter 4. Plane waves in a layered medium

1. Strain and stress in plane waves
2. Reflection at the free surface, \( (\text{normal incidence}) \)
3. Reflection and transmission at the plane boundary of two elastic media, \( (\text{normal incidence}) \)
4. Reflection from the free surface \( (\text{oblique incidence}) \)
5. Reflection from the rigid surface \( (\text{oblique incidence}) \)
6. Reflection and transmission at the boundary between fluid and elastic medium
7. Reflection and transmission at the boundary of two elastic media
8. Ray tubes and flux of energy
9. Reflection and transmission of plane waves in a multi-layered elastic medium

Chapter 5. Surface waves in an elastic medium

1. Rayleigh wave in a homogeneous half-space with a free boundary
2. Stoneley wave
3. Love waves
4. Rayleigh waves in two-layered medium

Chapter 6. Waves in a layered medium caused by linear and point sources

1. Linear source of \( P \) and \( SV \) waves in a homogeneous half-space with a free boundary
2. Waves in a homogeneous medium caused by the force \( \mathbf{F}^e \), \( (\text{two-dimensional case}) \)
3. Waves in a homogeneous half-space caused by force \( \mathbf{F}^e \)
4. Wavefields in the far zone \( (\text{linear source at the free surface}) \)
5. Buried linear source
6. Linear source in the presence of the boundary: elastic medium and fluid
7. Point source of elastic waves in the presence of the free boundary
